

Nuh (Noh or Noah) Disaster Mitigation History

Franklin Bell

A great deal has been written about Nuh (in the Quran) or Noh or Noah elsewhere, but until recently there has not been a satisfactory explanation of the nature of the Flood. That was, until the discover in the Southern Indian Ocean of the Burkle crater which arose from the impact of a meteorite impact crater. This crater is 29 km in diameter and has been dated to approximately 2900 BCE. This impact caused a large tsunami which impacted the west coast of Australia with a heigh of approximately 1.5 km. There are chevrons left behind as the water receded. It impacted other areas also. Going northwards, it was funneled between the Arabian Peninsula and India. It proceeded over the desert of Kuwait and Iraq until reaching the mountains of Ururat. Chevrons of sand were left there also. There are some YouTube videos about that. The meteorite vaporized a lot of seawater. This, being light, rose to the upper atmosphere and took a while to condense as rain.

At the south of these mountains of Ururat is Mt. Nisir or Cudi Dagi. On that mountain is a building erected by early Christians visiting the landing site of the Ark. The Ark may have landed lower down this mountain. No remains are apparent and this is now nearly 5000 years ago. Gobleki Tepe is rather older than this tsunami. The building in two pictures was built by early Christians. This information is in Wikipedia and elsewhere. There are tourists going there today as shown in the lower picture. I am not aware of any other videos relevant to this.

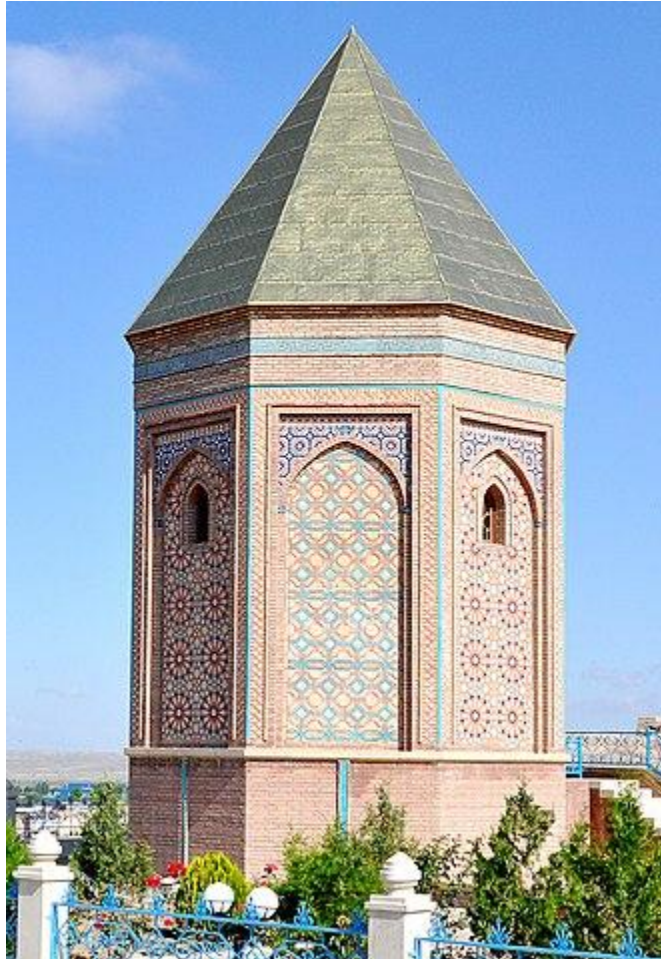

At Cizre, the nearby town, there is Mosque has a memorial dedicated to the Prophet Noh. Also, Imam Ali Mosque (Shia Islam), Najaf, Iraq are other sites.

It is possible to make a computer simulation of this impact. In fact, one has already been made, Google “Indian Ocean Meteorite impact simulation” for such a video. It does not appear likely however that a simulation of a large wooden boat carrying llamas, alpacas, boa constrictors, armadillos and jaguars to South America would subsequently land in North America.

The simulation also does not include the tremendous amount of steam that would be produced by such an impact which would take time to go to the upper atmosphere and cool down over a lengthy time to come down as rain.

In Azerbaijan in Nakchivan is a Mausoleum of the Prophet Nuh, It has been rebuilt over an old structure which reportedly has the bones of Noh underneath.

Why is the family of Noh significant and what is to be learned?

After the tsunami which destroyed a number of civilizations, Noh saved his family. So, they were separated from the culture of Satan, as Adam and Eve were supposed to be. As such, like Adam and Eve who were naked and Noh knew no sin, Noh's family was supposed to be likewise. Noh did feel like that, and on an occasion went to sleep with no clothes. However, Ham felt ashamed of the sight and agitated his two brothers to feel shame and covered Noh. Because by bringing shame to Noh, thus Noh cursed him.

As this is some theological interpretation, it is not universally agreed upon.

What could be a viewpoint of Nuh significance Today and what is to be learned?

Having provided Disaster Mitigation that was effective, Nuh can be considered the founder of Disaster Mitigation. Fortunately, the frequency of such large tsunamis is very infrequent, and astronomers are looking for potential hazards. Hopefully we are not distracted by other problems that we are not able to effectively make reasonable preparations at such time. When the comet was hitting Jupiter (and OJ Simpson news was at a pause) I suggested to the newsroom I was working in that discussion of the topic may be of interest, with some information from JPL. When the lady at JPL called me back later, I remarked to her that raising such a topic in a TV news environment could be hazardous to one's employment.
